

2. July 2020

**LACH DIAMANT presents:**

**PCD- and CBN-tipped engraving tools for the stamping technology sector, the packaging and printing industry**

Another product from LACH DIAMANT Germany - highly precise and wear-resistant.

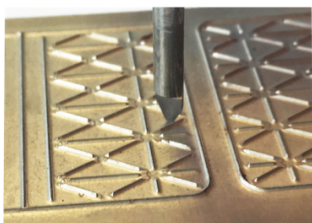

Engraving tools tipped with PCD or CBN cutting materials enables competitive machining strategies of processing magnetic flexible dies as well as cutting rotors made of high-quality challenging materials.

Other applications are for example scoring of PCB (electronic industry) as well as engraving of high-tensile and wear-resistant materials.

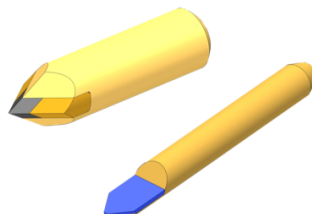

LACH DIAMANT is happy to advise all users based on almost 100 years of experience in dealing with the hardest of all things - diamond.

We offer PCD- and CBN-tipped engraving tools

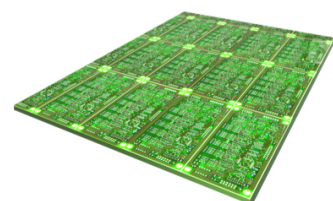

- in standard or customized dimensions
- as semi-finished or finished (incl. side-cut)
- with highest reachable surface qualities
- Made in Germany

Engraving of flexible die

Example: engraving tools

Scoring of PCB
